

Finia 650 Water Reservoir Step by Step Guide

On how to install a Small Pebble Pool using the Finia 650

Above is an image of a finished pebble pool.

Step 1

Make sure your Finia is Level. Using a Spirit Level is recommended.

Step 2

If you do need to level the base - then use a small amount of sand and cement until its level all the way round.

Step 3

The base can be disguised with rockery stone, a 12" long log roll, or pot plants.

Step 4

If you are constructing a simple pebble pool place the pump in the middle of the Finia with the tube extending through the lid. Add the lid and fill with water.

Step 5

Arrange the decorative stone around the fountain top to disguise the lid and Finia base.

Step 6

Adjust the height of the fountain so that it does not splash outside the container.

Note - Make sure all electrical cables are adequately protected, connections are water proof and the whole electrical installation is safe. If in doubt consult a qualified electrician.
